## 1. GETTING STARTED

---

1. Create an account on AirtimeNigeria.com ([www.airtimenigeria.com/register](http://www.airtimenigeria.com/register))
1. Verify at your phone number.
2. Have a balance of a least 1,000NGN or a cumulative recharge of 2,000NGN
3. Generate an API Token on the API Settings Page ([www.airtimenigeria.com/app/api/create](http://www.airtimenigeria.com/app/api/create))

## 2. PURCHASE AIRTIME

---

### ENDPOINT:

- <https://www.airtimenigeria.com/api/v1/airtime> (POST)

### HEADER PARAMETERS

- 'Authorization: Bearer {YOUR\_API\_TOKEN}',
- 'Accept: application/json',
- 'Content-Type: application/json'

### BODY PARAMETERS

**network\_operator:** string | required | ['mtn', 'airtel', 'glo', '9mobile']

The mobile network operator of the line(s) you want to recharge. We currently support "MTN", "Airtel", "Glo" and "9mobile".

**phone:** string | required

Single phone number or a list of comma-separated phone numbers.

**amount:** integer | required

Airtime recharge amount. The minimum amount is 50NGN and the maximum is 50,000NGN.

**max\_amount:** string | required

Prices sometimes do change even without notice. In such cases, we will apply the price change immediately we learn of it. To avoid running at losses especially when you haven't had opportunity to adjust charges at your end, you can set the maximum you are expecting to pay for an order. The request will be dropped if the cost is more than your set max\_amount. It's better your order fail than running at loss.

**callback\_url:** string | optional

If your request includes a callback\_url, we will push delivery reports/statuses to your server as soon as we receive them. The callback URL should be an absolute URL, for example:

'<https://www.airtimely.com/api/reports>'

**customer\_reference:** string | optional

Unique internal identifier to enable your system easily map delivery report for easier delivery report mapping.

#### HEADER PARAMETERS

- 'Authorization: Bearer {YOUR\_API\_TOKEN}',
- 'Accept: application/json',
- 'Content-Type: application/json'

#### BODY PARAMETERS

**phone:** string | required

Single phone number or a list of comma-separated phone numbers.

**package\_code:** string | optional if plan\_id is present

The package\_code determines the subscription plan to be activated on the provided phone(s). Kindly check the data plan endpoint for a list of supported data plans and their corresponding package\_codes => <https://www.airtimenigeria.com/api/v1/data/plans>. [See Section 5 for more details.](#)

**plan\_id:** int | optional if package\_code is present

This can be used in lieu of package\_code. We added the plan\_id parameter to support some legacy systems that expects integers as plan identifiers. The plan\_id can be retrieved from the data plans endpoint => <https://www.airtimenigeria.com/api/v1/data/plans>. [See Section 5 for more details.](#)

**N/B:** *If package\_code and plan\_id is present in a request, the package\_code will override the plan\_id. Ensure that package\_code isn't present when making use of plan\_id.*

**max\_amount:** string | optional

Prices sometimes do change even without notice. In such cases, we will apply the price change immediately we learn of it. To avoid running at losses especially when you haven't had opportunity to adjust charges at your end, you can set the maximum you are willing to pay for an order. The request will be dropped if the cost is more than your set max\_amount as it is better your orders fail than running at losses.

**callback\_url:** string | optional

If your request includes a callback\_url, we will push delivery reports/statuses to your server as soon as we received them. The callback URL should be an absolute URL, for example:

## 4. VEND DATA FROM DATA WALLET BALANCE

---

### PREREQUISITES:

You need to first purchase bulk data on this page => <https://www.airtimenigeria.com/app/bulk/data/buy> before you can vend data from your wallet balance. MTN SME, Airtel EDS/CG and GLO CG are available for bulk purchase.

Also, you can choose instant processing when vending from data wallet and you will delivery status and gateway\_response.

### ENDPOINT:

- <https://www.airtimenigeria.com/api/v1/data/wallet> (POST)

### HEADER PARAMETERS

- 'Authorization: Bearer {YOUR\_API\_TOKEN}',
- 'Accept: application/json',
- 'Content-Type: application/json'

### BODY PARAMETERS

**phone:** string | required

Single phone number or a list of comma-separated phone numbers.

**package\_code:** string | optional if plan\_id is present

The package\_code determines the subscription plan to be activated on the provided phone(s). Kindly check the data plan endpoint for a list of supported data plans and their corresponding package\_codes => <https://www.airtimenigeria.com/api/v1/data/plans>. [See Section 5 for more details.](#)

**plan\_id:** int | optional if package\_code is present

This can be used in lieu of package\_code. We added the plan\_id parameter to support some legacy systems that expects integers as plan identifiers. The plan\_id can be retrieved from the data plans endpoint => <https://www.airtimenigeria.com/api/v1/data/plans>. [See Section 5 for more details.](#)

**N/B:** If package\_code and plan\_id is present in a request, the package\_code will override the plan\_id. Ensure that package\_code isn't present when making use of plan\_id.

**process\_type:** string | optional

We send all requests to the queue and process each order from the queue. With the process\_type you can choose to rather have your orders processed instantly which means it you will receive the

delivery\_status and gateway\_response immediately and not have to wait for us to push the delivery report status to you when we receive it. The downside is that it will take longer for the request to complete, and the connection closed especially when there is a network issue at the provider's end. The available options are 'queue' and 'instant'.

**callback\_url:** string | optional

If your request includes a callback\_url, we will push delivery reports/statuses to your server as soon as we received them. The callback URL should be an absolute URL, for example: 'https://www.airtimely.com/api/reports'

**customer\_reference:** string | optional

Unique internal identifier to enable your system easily map delivery report for easier delivery report mapping.
